EDUCATION

MVJ college of engineering B.Tech Information Science	2020-2024
CGPA: 8.96	
Bishop Conrad Sr. sec. school 12th(PCMC)	2019-2020
88%	
Bishop Conrad Sr. sec. school 10th(CBSE)	2017-2018
86.8%	

WORK EXPERIENCE

Software Developer

Keystride

July 2024- Present

- Designed multi-tenant PostgreSQL architecture with RLS-based access control for secure tenant isolation across multiple clients.
- Led database migrations and CDC-based replication pipelines, enabling near-zero downtime and high data consistency.
- Built event-driven backend systems (AWS Lambda, FastAPI) and containerized services (Docker, ECS, ECR) handling production workloads.
- Developed secure data pipelines using S3, KMS, presigned URLs, and SFTP for sensitive data ingestion.
- Improved system reliability and performance through debugging, observability, and API optimization across distributed services.
- Implemented security and compliance frameworks including OWASP scanning and audit standards.

Machine Learning Engineer- Intern

Keystride

January 2024 - July2024

- Built PyTorch models for real-time asset pricing and risk prediction.
- Improved portfolio risk-adjusted returns by 15% and reduced exposure by 8%.
- Designed event-driven ML systems (AWS Lambda) with 95% reliability.

Quant Analyst

Quantstride

July 2023 - January2024

- Developed complex quantitative models to assist with pricing, risk management, and portfolio allocation decisions, leading to maximum revenue in the most efficient risks.
- Implemented algorithms to automate quantitative trading strategies, allowing for 24/7 strategy execution, and reducing risk exposure by 8%.

PROJECTS

LLM-based RAG System

- Built GenAI system using Llama/Mistral + vector database for semantic search and Q&A.
- Implemented embedding, retrieval, and prompt-based generation pipelines, improving response relevance and latency.
- Exposed scalable inference APIs using FastAPI, supporting concurrent requests efficiently.

AI Plagiarism check software

Mini project for coursework • [Link](#)

- Developed an AI-driven system to detect and compare content across web sources using natural language processing, advanced machine learning algorithms, and semantic similarity analysis techniques.
- Achieved a 20% reduction in false positive plagiarism reports, enhancing the accuracy of content evaluation.

Portfolio website [Link](#)

- Crafted a user-friendly and responsive interface by implementing modern web design techniques, and effectively utilizing CSS, SCSS, JavaScript, HTML, and PHP to develop responsive web pages and UI components that impressed visitors.

Stock market analysis

- Initiated a practice portfolio with virtual investments, allowing for hands-on experience in stock selection and tracking, resulting in a 10% gain over a simulated 6-month period and improved confidence in decision-making.
- Achieved a 90% accuracy rate in identifying and analyzing key financial ratios within the stock analysis process.

SKILLS & CERTIFICATIONS

Languages: Python, Java, SQL, JavaScript

AI/ML: PyTorch, TensorFlow, Transformers, NLP

Cloud & Systems: AWS (Lambda, ECS, ECR, S3, RDS, Cognito), Docker

Backend: FastAPI, Flask, REST APIs

Systems: Distributed systems, event-driven architecture, multi-tenant design

Data: PostgreSQL, schema design, migrations, RLS, CDC pipelines

POSITION OF RESPONSIBILITY

Co-organizer | TEDxMVJCE • May 2021 -September 2023

- Co-organized TEDx event with 100 attendees and 7 speakers, resulting in a 20% increase in participant satisfaction ratings.
- Managing 6 additional teams to delegate tasks & to complete the entire program on time and within budget.
